

Column in which the
Values might present

filtered_data = data[data['column'].isin(['value1', 'value2',])]

filtered_data

Method to check values'
Presence in a column

Values based on which
Presence in a column,
The data will be filtered

```
graph TD; A[Column in which the Values might present] --> B[data['column']]; B --> C[data['column'].isin(['value1', 'value2', .....])]; C --> D[filtered_data]; E[Method to check values' Presence in a column] --> F[.isin()]; G[Values based on which Presence in a column, The data will be filtered] --- H(['value1', 'value2', .....]);
```
